PORTAL Building UNC Charlotte

PROBLEM

Redecam offers highly engineered air pollution control solutions helping customers all over the globe meet their air emission reduction targets rapidly and cost-effectively. Redecam has a significant technology center at its headquarters in Milan, Italy. They wanted to open a US office that would give them a base for expanding across North America without compromising the service they offer to their clients. They needed a small, flexible office that would allow them to grow as needed. They also wanted access to talent to help them grow and use of state-of-the-art facilities for flow analyses and mechanical design closer to their growth market here.

SOLUTION

The PORTAL Building on the Charlotte Research Institute campus of UNC Charlotte was built to foster collaboration with industry. With flexible, built-out office suites in a "class-A" setting, with furniture and flexible lease terms, Redecam was able to move into a suite large enough for them to start quickly and easily. PORTAL is also adjacent to UNC Charlotte's College of Engineering with computational fluid dynamics analyses capabilities.

RESULTS

Redecam has expanded and works with researchers at UNC Charlotte, under the direction of Redecam's engineers in Milan to deliver faster turnaround for their North American clients and get exposure to new ideas. Definitely an "INTELLIGENT PARTNERSHIP."

The Charlotte Research Institute (CRI) is the gateway for business-government-university partnerships at UNC Charlotte - North Carolina's urban research university. We enhance the region's innovation and economic development through collaboration between UNC Charlotte's exceptional faculty, academic talent, industry, entrepreneurs, and government agencies.
